ABOUT ME

I am a Cloud Developer with experience in developing low-code apps using Power Platform. As a fresher with nearly one year working in the IT industry, I have successfully done several projects related to developing apps, including Canteen management app, Time attendance app, etc. Those applications not only support customers to cut down on the time their employees have to spend on paperwork but also help them to integrate their process and data to easily manage. With all of the cumulative experience as well as the desire to grow professionally, I believe I can handle all the assigned tasks efficiently and effectively.
